

# Governance and Development:

*Lessons from political economy  
research in the past 20 years*

Claudio Ferraz  
UBC, PUC-Rio, NBER

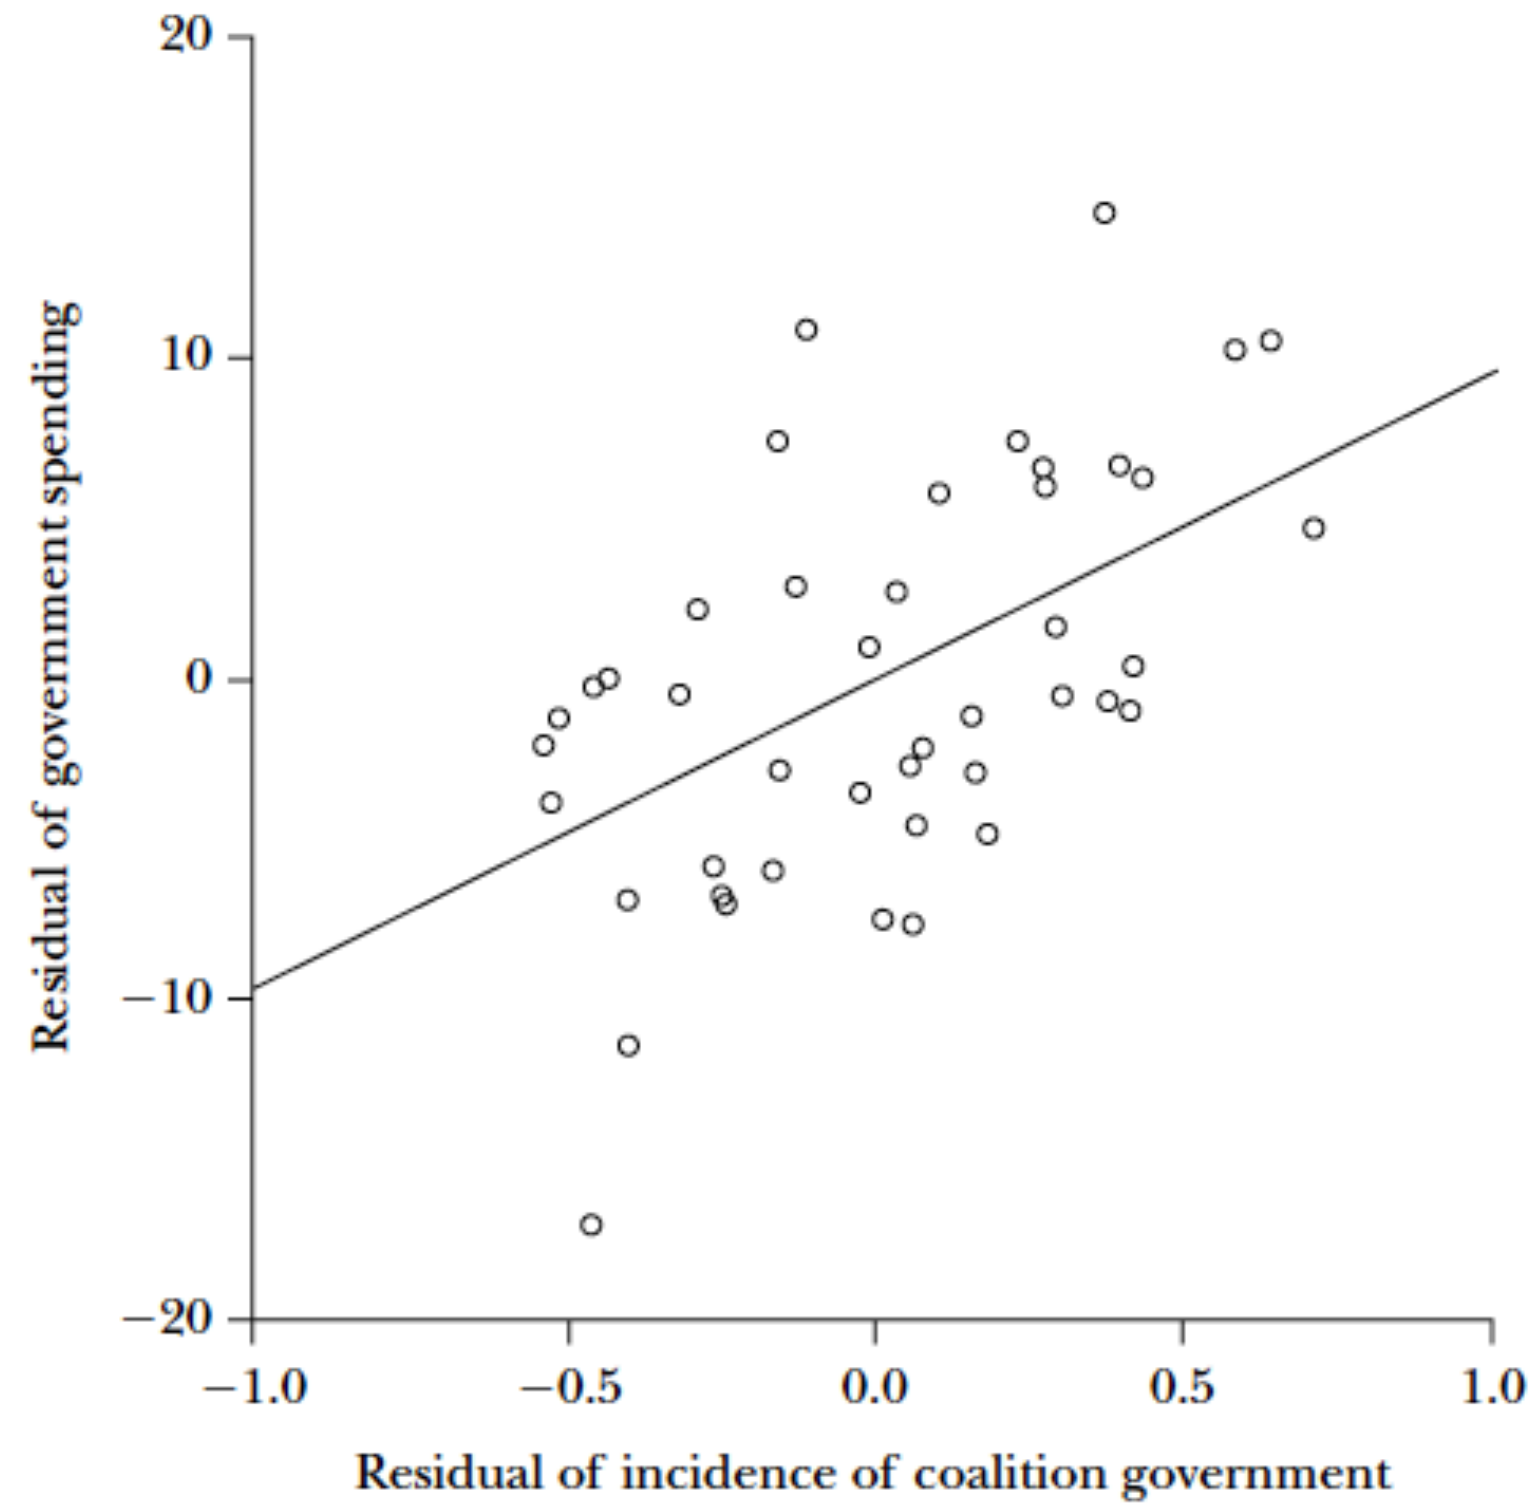

**What did we know 25  
years ago?**

# Governance matters

1. The process by which governments are selected, monitored and replaced (**representation and accountability**)
2. The capacity of the government to effectively formulate and implement sound policies (**state capacity**)
3. The respect of citizens and the state for the institutions that govern economic and social interactions amongst them (**norms, trust, rule of law**)

Kaufman, Kraay, and Zoido-Lobaton (1999)

Total Government Spending and Incidence of Coalition Governments

Persson and Tabellini (2004)  
Baland, Moene, Robinson (2010)

Figure 2 Income and government effectiveness.

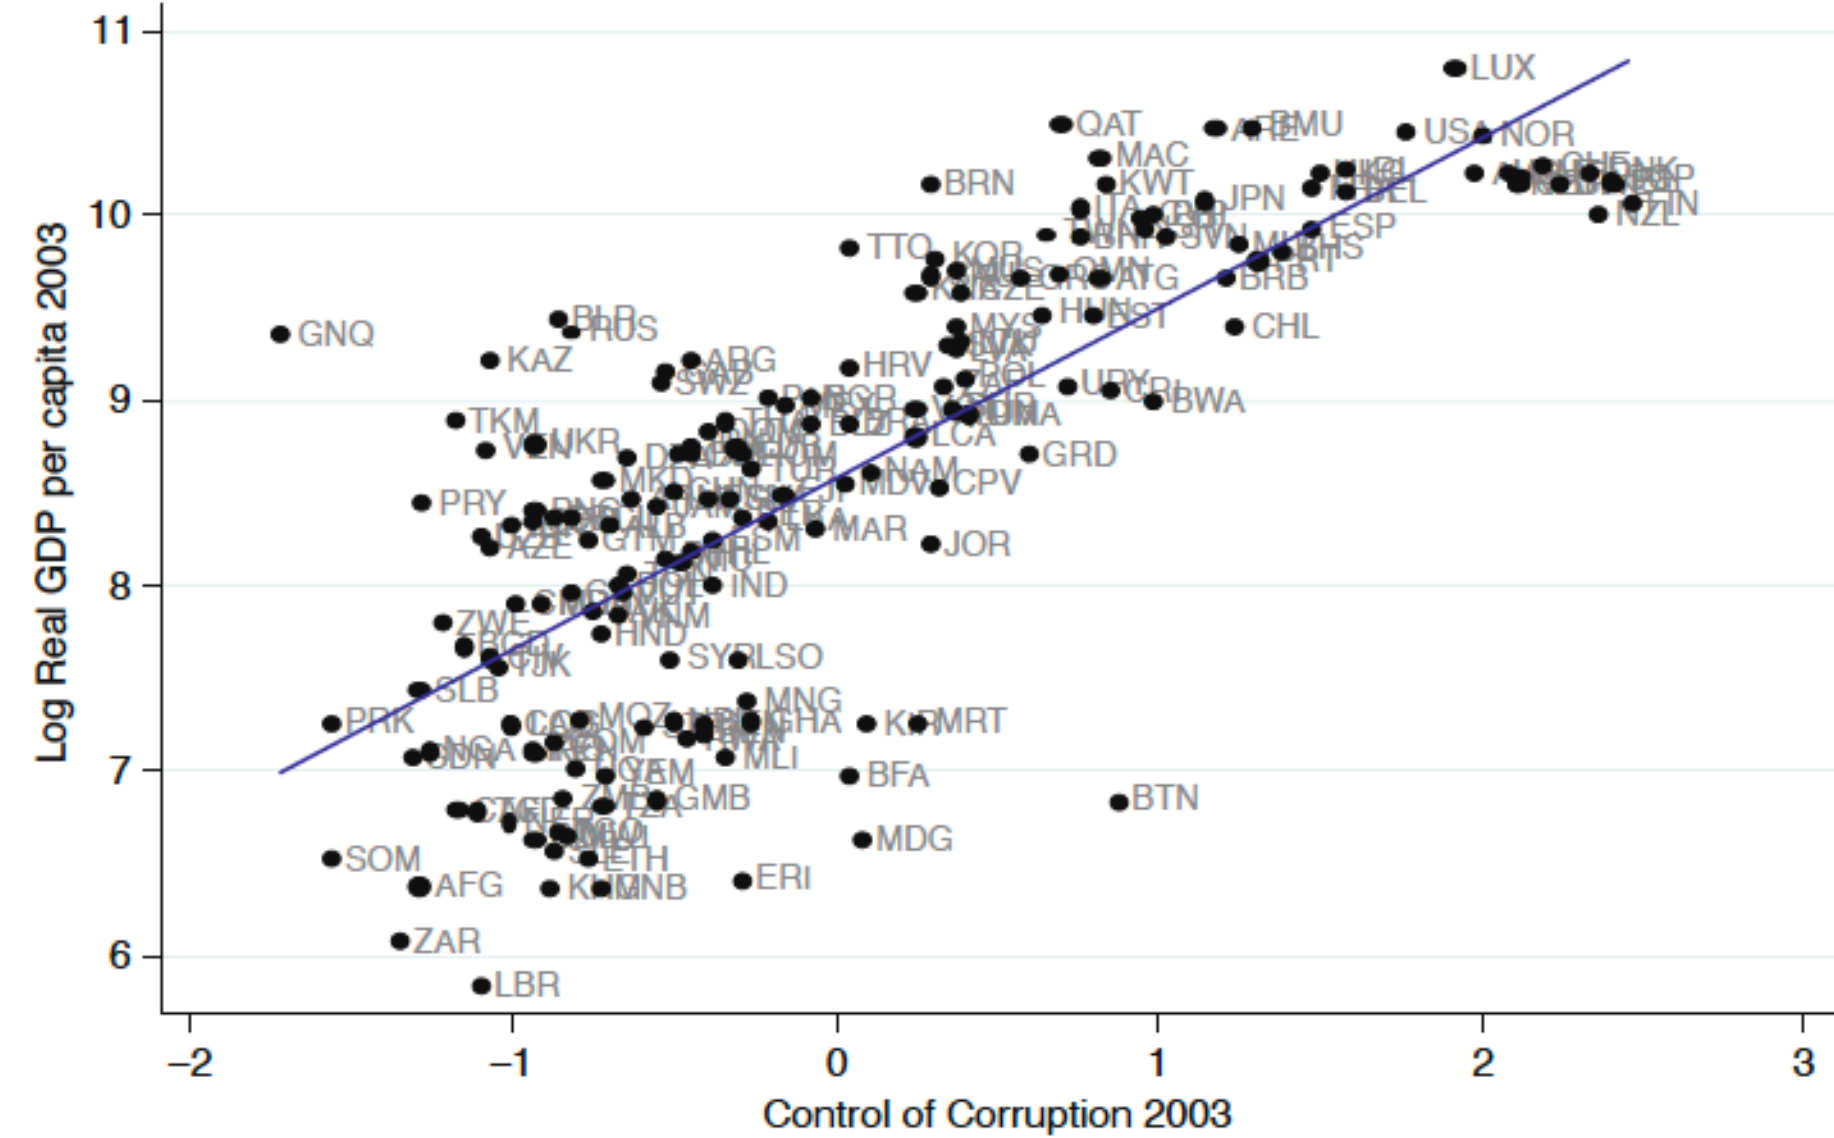

Figure 5 Income and control of corruption.

# What institutions? What mechanisms?

## CHAPTER 14

---

- Natural experiments and within country variation
- New ways to measure governance with microdata
- Field experiments that change institutions and mechanisms of governance

### **Institutions and Development:**

#### **A View from Below**

**Rohini Pande and Christopher Udry\***

LOCAL CAPTURE: EVIDENCE FROM A CENTRAL  
GOVERNMENT TRANSFER PROGRAM IN UGANDA\*

RITVA REINIKKA AND JAKOB SVENSSON

### **Monitoring Corruption: Evidence from a Field Experiment in Indonesia**

---

Benjamin A. Olken

*Harvard University and National Bureau of Economic Research*

**What have we learned?**

# Three different areas

1. Representation and political inclusiveness
2. Accountability and responsiveness
3. State effectiveness and state capacity

# Representation and political inclusiveness

# Including voters and politicians

- Inclusiveness of marginalized **voters**
  - Giving **voice through voting** change policies (Fujiwara 2015)
  - Politicians might adapt with clientelism and vote-trading (Finan and Schechter 2012, Anderson, Francois and Kotwal 2015)
- Inclusiveness of **politicians** from marginalized groups
  - **Electoral quotas** change policies (Pande 2003, Chattopadhyay and Duflo 2004, Beath, Christia and Enikolopov 2013, Gulzar et al 2020)
  - But not if elites and political parties undermine reforms (Bagues and Esteves-Volar 2012; Bagues and Campa 2021)

# Direct participation and communication

- Citizen participation in the decision-making process
  - **Community Driven Development and participatory budgets.** Effects on infrastructure but no effects on participation or social cohesion (Casey, Glennerster and Miguel 2012; Humphreys, de la Sierra and Van der Windt, 2013). Agency and legitimacy matter for satisfaction (Olken 2010)
- Communication between citizens, bureaucrats and politicians
  - **Complaint channels, text messages, social media.** Not great results up to now (Grossman, Humphreys, Sacramone-Lutz 2020)

# **Accountability and responsiveness**

# Information and political response

- **Voters use information** to enforce accountability (Ferraz and Finan 2008, Bobonis et al 2016 et al, Arias et al 2022) and **politicians respond** (Casey 2015, Bidwell, Casey, and Glennerster 2020, Banerjee et al 2021, Cruz et al 2021)
  - But negative information can disengage voters, reduce trust, and decrease support for democracy (Chong et al 2015)
  - And positive information (education) does not always generate rewards (Bursztyn 2016, Cox et al 2020, Dias and Ferraz 2020, Sandholtz 2023)
- Information can also affect **pressure through citizens** (Bjorkman and Svensson 2009)

# Rules and institutions

- **Elected politicians** (*vis-à-vis* appointed politicians) affect governance and public good provision (Martinez-Bravo 2014, Burgess et al 2015, Martinez-Bravo et al 2017)
- **Electoral rules** that affect reelection, political competition, term-length, design of districts affect governance, policies and outcomes (Ferraz and Finan 2008, Dal Bó and Rossi 2011, De Janvry et al 2012, Nah 2014, Beath et al. 2016)
- **Political selection** driven by wages of politicians, size of legislature, resources (Ferraz and Finan 2011, Brollo et al 2013, Dal Bó and Finan 2018)

# Political parties and clientelism

- Political parties and the interest of voters
  - **Information to parties** about what voters want and preferences of candidates (Casey et al 2021)
- Clientelism and vote-buying
  - Policies that **increase income** (e.g. CCT) and **reduce vulnerability** free voters to vote from non-clientelistic politicians (Bobonis et al 2022, Frey 2019)
  - Experiments to reduce **vote-selling** or reduce **electoral violence** (Collier and Vicente 2014, Aker, Collier, Vicente 2017)

# State effectiveness and capacity

# Bureaucracies

- **Higher salaries and social contracts** might help attract better bureaucrats (Dal Bó, Finan, and Rossi 2013; Ashraf et al 2020; Zeitlin et al 2021)
  - But the Mexican government got rid of the temporary program in Dal Bó et al (2013)
- **Incentives** through bonuses and regional allocation improve performance (Khan, Khwaja, Olken 2016, 2019; Deserranno et al 2023, 2024)
  - But they can also backfire creating perverse incentives (Acemoglu et al 2020)

# Other issues with bureaucracies

- Other ways to improve bureaucratic capacity
  - **Delegation** (Bandiera et al 2021)
  - Improvement in **management** (Best et al 2023, Muñoz and Prem 2023, Muñoz and Otero 2024)
  - Reduce **turnover** (Akhtari et al 2022)
  - Reduce **nepotism** (Riaño 2023)

# What have we not learned?

- Why voters, in many instances, do not reward improvements in infrastructure and public service delivery?
- What are the barriers to the improvement in the quality of politicians? How do we fix those?
- How to increase the trust of voters in democracy?
- How to incorporate system wide and unintended effects into our analysis? E.g. anti-corruption crackdown in Brazil and China (Hsieh, Chong-en and Song 2019)

# Political economy of adoption

- Many of successful interventions are discontinued despite effectiveness or are not adopted
  - Anti-corruption audits evaluated by Ferraz and Finan (2008) and Avis, Ferraz and Finan (2018) discontinued in 2016
  - Del Bó et al (2011) México intervention on salaries was shut down
  - The poster-child of government RCTs Progresa/Oportunidades was finished
- Why?

# Political mismatch

- Effective public policies might not be visible to voters
- Some policies only generate returns in the long-run, but elections occur every 4 or 5 years
- Inefficient ways to redistribute might be more effective from an electoral perspective (clientelism, patronage, misallocation infrastructure)
- Incumbents get votes when they create new programs/projects, not when they continue existing policies implemented by others
- Political sunk-cost. Once policies are implemented it is difficult to get rid of them (e.g. subsidies in industrial policy)

# What is next?

- Political economy of policy adoption and implementation
  - Policy experimentation in China (Wang and Yang 2023)
  - Bottlenecks of adoption (DellaVigna, Kim and Linos 2023)
  - Use of research by policymakers (Hjort et al 2021)
- Experiment with program design that is politically feasible (e.g. how to minimize unions reaction to educational reform?), think about winners and losers, vested interests

# What is next?

- Democratic backsliding and mistrust in democracy
- Social media, fake-news, polarization (ethnicity, religion)
- Political economy of climate change
